## Greetings!

We are honored you are holding this brochure in your hands right now and we hope you will find it useful for getting to know more about companies in Czechia in order to start successful business relationships with companies in Algeria and Kenya.

This business mission is focused on Czech companies operating in the fields of water management, waste management, aquaculture, smart technologies for water and waste, including circularity, and green energy.

In Algeria, the Czech delegation will visit the capital city, Algiers, from February 2 to 4, and after a flight on February 4, it will continue to Nairobi, Kenya, from February 4 to 7. The program includes business forums with B2B meetings, providing companies with direct contact between our countries and companies.

We look forward to meeting you.

CZECH CHAMBER OF COMMERCE

Na Florenci 2116/15, 110 00 Prague 1

+420 266 721 300

office@komora.cz

www.komora.cz

Dear Partners,

I am delighted to lead the business mission to Algeria and Kenya in February 2025!

For Algeria, addressing climate change and ensuring sustainable water management have become crucial issues. Topics such as conservation of water resources or improving public water services offer opportunities for collaboration. The Czech Republic and Algeria have also worked together on various projects, including sustainable management of national parks, which highlights our shared commitment to the protection of biodiversity.

In Kenya, challenges related to sanitation and waste treatment, particularly in urban areas, also present opportunities for knowledge-sharing and cooperative innovation. And Nairobi's role as the headquarters of the United Nations Environment Programme (UNEP) underscores the country's importance in global environmental efforts, and we are keen to explore synergies in these areas.

By working together, Czech experts and local counterparts can exchange ideas and technologies. As Minister of the Environment, my goal is to foster these meaningful connections. I firmly believe that the promotion of green technologies and approaches, such as renewable energy, the circular economy, and sustainable water and waste management is the right way to contribute to global sustainable development.

I am confident that this mission will be a step forward in our shared journey.

**Petr Hladik**

Minister of Environment of the Czech Republic

Ladies and Gentlemen,

It is my great pleasure to extend a warm welcome on behalf of the Czech Chamber of Commerce as we enjoy the distinct honor to accompany the Minister of the Environment Petr Hladík on his visit to Algeria and Kenya.

This mission marks a historic occasion as it is the first business mission to Algeria and Kenya with Minister of the Environment. We are delighted to have 16 distinguished companies participating. Our delegation is composed of representatives from companies involved in the fields of energy and solar technologies, water management, waste treatment and sewage treatment, as well as legal consulting and finance.

The Czech Republic pays great attention to the development of economic relations with African countries. This is evidenced by trips made by state officials and business figures, including the Prime Minister last year.

Minister Hladík's trip accompanied by the business mission from the Chamber of Commerce is a logical follow-up to further develop mutual trade relations.

We are confident that our discussions and engagements during this mission will lead to fruitful collaboration and mutual benefits. We look forward to exploring new avenues for investment and trade and to strengthening the bonds between the Czech Republic and Algeria and Kenya.

**Jana Havrdová**

Vice President of the Czech Chamber of Commerce

We are involved in the development of new eco-concretes and mortar mixtures based on binder systems. Our aim is to replace Portland cement, a major CO<sub>2</sub> emitter. We use of waste and quality raw materials with varying water-extractable fractions. This leads to a reduction in CO<sub>2</sub> emissions by 50-80% compared to traditional concrete. Materials are heat-resistant and health-friendly. Applications are in building structures, urban furniture, soundproof walls, etc.
